1.0 DOCUMENT INFORMATION

1.1 Purpose

The System Requirements Document outlines the agreed system specifications. Once approved, it becomes the baseline to ensure the system meets business goals. Sign-off is required for development to start, and any changes must follow the System Enhancement Management process.

1.2 Intended Audience

The intended audience for this document includes project stakeholders and any team members involved in defining, implementing, or validating the system requirements.

1.3 Revision History

This section records all modifications to the document until it reaches Version 1.0, at which point it is finalized and established as the baseline for future reference. Once baselined, any new changes will be assessed based on their severity — significant changes may result in an addendum, while less critical updates may be handled through a formal change request.
