1.0 DOCUMENT INFORMATION

1.1 Purpose

The System Requirements Document outlines the agreed system specifications. Once approved, it becomes the baseline to ensure the system meets business goals. Sign-off is required for development to start, and any changes must follow the System Enhancement Management process.

1.2 Intended Audience

The intended audience for this document includes project stakeholders and any team members involved in defining, implementing, or validating the system requirements.

1.3 Revision History

This section records all modifications to the document until it reaches Version 1.0, at which point it is finalized and established as the baseline for future reference. Once baselined, any new changes will be assessed based on their severity – significant changes may result in an addendum, while less critical updates may be handled through a formal change request.

Version No	Date	Revised By	Reason for Revision
0.1	11.08.2026 (Tues)	Chee Mei Jia	Initial Draft
0.2	12.08.2026 (Wed)	Chee Mei Jia	Populated Section 2.2.5 Delivery Order field data source mapping.
0.3	13.08.2026 (Thurs)	Chee Mei Jia	Updated Delivery Order generation trigger, download button, and field sources per sync-up with Yeng (13.08).

Version No	Date	Revised By	Reason for Revision
0.4	14.08.2026 (Fri)	Chee Mei Jia	Aligned the SRD to the finalized Delivery Order design (Existing UCD) and updated scope and additional notes; email notification removed (not required for this Change Request).
0.5	18.08.2026 (Tues)	Chee Mei Jia	Updated scope, document layout, and Delivery Order generation details.
0.6	19.08.2026 (Wed)	Chee Mei Jia	Removed content applicable to DO Type = New Registration; scope limited to DO Type = Device Purchase.
1.0	19.08.2026 (Wed)	Chee Mei Jia	This is the baseline of the Change Request.
1.1	28.08.2026 (Fri)	Chee Mei Jia	Updated Section 2.2.3 Affected Pages Updated Section 2.2.4 Delivery Order Generation Updated Section 2.2.5 Field Data Source Mapping Updated Appendix Requirement Change Log

Note: Update made to the document is highlighted in blue

1.4 Glossary of Terms

#	Abbreviation / Term	Interpretation / Description
1	DO	Delivery Order
2	SN	Serial Number
3	UCD	Used Car Dealer

1.5 Associated Document(s)

#	Item	Location / URL	Rationale for Relevance
1	EAIN-12166 – [eAuto-BackOffice] Service Hub: Enable DO Creation for Device Purchase with Interim Document Upload Space	https://mfservices.atlassian.net/browse/EAIN-12166	Main enhancement ticket
2	CCB-903 – EAUTO To Enable DO Creation for Device Purchase with Interim Document Upload Space	https://mfservices.atlassian.net/browse/CCB-903	Change Control Board ticket
3	EAUTO-1002 – ENHANCEMENT SERVICE HUB	https://mfservices.atlassian.net/browse/EAUTO-1002	Source enhancement request

#	Item	Location / URL	Rationale for Relevance
4	EAIN-12167 – [eAuto-BackOffice] Service Hub: Allow Ops to Input Device SN on Device Purchase SR Info Page When Updating Delivery Status to Arranged	https://mfsservices.atlassian.net/browse/EAIN-12167	Device Serial Number source (dependency)

2.0 REQUIREMENT

2.1 High-Level Requirement Overview

#	Item	Description
2.1.1	Enhancement Overview	Enable BackOffice to generate a Delivery Order for a Device Purchase transaction directly from the Transaction Details page. The Delivery Order is auto-populated by the system and produced as a PDF.
2.1.2	Key Value(s) Expected	Removes manual Delivery Order preparation — BackOffice produces a ready Delivery Order (PDF) in one click.
2.1.3	Additional Note(s)	Existing Delivery Order feature is available under Company Management and can be reused as the basis for the generated Delivery Order. The UCD portal must set the maximum purchase quantity to 40 units per transaction. This Delivery Order template applies to (reuses) the existing Delivery Order template feature. This Change Request covers DO Type = Device Purchase only. DO Type = New Registration is handled under a separate request.

2.1.1 Assumptions

#	Assumption
1	Existing Delivery Order template and format under Company Management (BackOffice > Account Management > Manage Company Accounts > Company Details > "Print DO") can be reused as the basis for the generated Delivery Order.
2	All data required to populate the Delivery Order (company, payment, and device details) is available on the Device Purchase transaction record.
3	Device Serial Number is captured via EAJNT-12167 and is available for the Delivery Order to consume.

2.1.2 Out-of-Scope

#	Item	Reason
1	Changes to the existing "Print DO" feature under Company Management	Existing feature remains unchanged.
2	Delivery Order generation for transaction types other than Device Purchase	Not part of this request.
3	Interim manual document upload space	Excluded. This SRD covers system auto-generation only, as confirmed with the requestor.

#	Item	Reason
4	DO Type = New Registration	Handled under a separate request. This Change Request covers DO Type = Device Purchase only.
5	Email notification on Delivery Order generation	Not required for this Change Request (confirmed with Yeng, 14.08).

2.2 Key Highlights and Baseline Requirements

The following key highlights and requirements were established during the initial sync-up sessions with the requestor. As this forms the baseline, any changes requested thereafter may result in adjustments to scope, timeline, or deliverables, for which the requestor will be responsible to review and confirm.

2.2.1 Background

#	Affected Item	Description
1	Project	eAuto
2	Portal	BackOffice
3	Module	Service Hub
4	Request	Enable automatic Delivery Order generation for Device Purchase from the Transaction Details page.
5	Additional Note	Existing Delivery Order feature is already available under the Company Management listing. Can consider reusing it instead of creating a new one.

2.2.2 Existing Issue & Expected Behaviour

#	Item	Description
1	Existing Issue / Behaviour	No Delivery Order is generated by the system for a Device Purchase. BackOffice has no way to produce a Delivery Order from the transaction.
2	Expected New Handling / Behaviour	The Delivery Order is generated automatically by the system when the BackOffice user updates the consignment note. The system auto-populates the Delivery Order and produces it as a PDF, reusing the existing Delivery Order template. A "DO" button on the Transaction Details page lets the BackOffice user download the generated Delivery Order as a PDF.

2.2.3 Affected Pages

#	Affected Pages	Description
1	BackOffice > Proforma Invoice / e-Invoice > Biometric Device Purchase & Software Installation Listing > Transaction Details Page	Delivery Order is generated when the BackOffice user updates the consignment note. A "DO" button is added on this page to download the generated Delivery Order as a PDF.
2	BackOffice > Account Management > Manage Company Accounts > Company Details ("Print DO")	Existing Delivery Order feature referenced for template and format reuse. No change to this page.
3	UCD Service Hub > Biometric Device Purchase > Step 1 Selection	Purchase Device quantity is validated here; a maximum of 40 units per transaction applies, which determines whether the generated Delivery Order is split.

2.2.4 Delivery Order (DO) Generation

#	Requirement ID	Item	Description	Acceptance Criteria
1	EAIN-12166-REQ-001	DO Auto-Generation & Download	The Delivery Order is generated automatically by the system when the BackOffice user updates the consignment note. A "DO" button on the Device Purchase Transaction Details page lets the BackOffice user download the generated Delivery Order as a PDF.	On consignment note update, the system generates the Delivery Order; clicking the "DO" button downloads it as a PDF.
2	EAIN-12166-REQ-002	Auto-Populate DO Data	System auto-populates the Delivery Order fields from the transaction record. No manual data entry by the user. Field-level data source mapping is detailed in Section 2.2.5.	On click, the Delivery Order is populated with the transaction's company, payment, and device information without any manual input.

3	EAIMT-12166-REQ-003	Device Serial Number	Device Serial Number on the Delivery Order is populated from the SN entered via EAIMT-12167. A Delivery Order lists up to 20 device serial numbers (maximum 20 units per Delivery Order). A transaction may contain up to 40 units; when it exceeds 20, it is split into up to 2 Delivery Orders (max 20 each), each with its own Delivery Order Number, combined in one PDF of at most 2 pages. Split allocation: units are allocated in blocks of 20 in serial order, and the final Delivery Order carries the remainder (e.g. 25 units are split as 20 + 5). Each Delivery Order displays the Number of Device for that Delivery Order only, not the transaction total. Device Serial Numbers run continuously across the split – the second Delivery Order continues from where the first ended (e.g. ZF 00000021 to ZF 00000040).	The Delivery Order's Device Serial No. reflects the SN entered by Ops (EAIMT-12167) for that transaction. A 40-unit transaction produces two Delivery Orders (20 + 20) with numbers DP-0001 and DP-0002 in one 2-page PDF; each Delivery Order lists 20 serials. A 25-unit transaction produces two Delivery Orders (20 + 5); the second Delivery Order lists 5 serial numbers (ZF 00000021 to ZF 00000025) and shows Number of Device = 5. Each Delivery Order in a split displays its own Delivery Order Number and split annotation.
---	---------------------	-----------------------------	---	---

#	Requirement ID	Item	Description	Acceptance Criteria
			Each Delivery Order in a split displays a split annotation below the Delivery Order Number, in the format "Split order · 1 of 2 · 40 units total".	
4	EAIN-12166-REQ-004	Remarks	Delivery Order includes a Remarks section, defaulting to "Device warranty 1 year".	The generated Delivery Order shows a Remarks entry containing "Device warranty 1 year" by default.
5	EAIN-12166-REQ-005	Generate as PDF	System generates the Delivery Order as a PDF using the existing Delivery Order template and format.	Clicking "DO" produces a PDF Delivery Order that matches the existing Company Management Delivery Order layout.
6	EAIN-12166-REQ-006	Generation – Error Handling	Handle failure scenarios during Delivery Order generation.	Example 1: Required transaction data incomplete → Generation is blocked. Message: "Unable to generate Delivery Order: required details are incomplete." Example 2: System / generation failure → Message: "Delivery Order could not be generated. Please try again."

#	Requirement ID	Item	Description	Acceptance Criteria
7	EAIN-12166-REQ-007	Purchase Quantity Validation	On the UCD Service Hub (Biometric Device Purchase > Step 1 Selection), the Purchase Device quantity is capped at 40 units per transaction. Increment ("+"): the quantity can only be increased up to 40. Once 40 is reached, the "+" control is disabled and cannot increment further. Manual entry: if a value greater than 40 is keyed in directly, the system replaces it with 40 when the quantity field loses focus, and displays the validation message. Validation message: "A maximum of 40 devices can be purchased per transaction." The decrement ("-") control remains enabled at 40 so the quantity can be reduced.	Clicking "+" repeatedly stops at 40; the "+" control is disabled at 40 and no quantity above 40 can be reached. Keying in 45 results in the quantity being corrected to 40 and the validation message being displayed. The validation message reads exactly: "A maximum of 40 devices can be purchased per transaction." The "-" control remains enabled at 40; reducing the quantity below 40 re-enables the "+" control. A transaction can therefore never exceed 40 units, so a generated Delivery Order never exceeds 2 pages (see EAIN-12166-REQ-003).

#	Requirement ID	Item	Description	Acceptance Criteria
8	EASINT-12166-REQ-008	Delivery Order Data Snapshot	Delivery Order data is a snapshot taken at the point of generation. Once generated, the Delivery Order retains the values as at that date and time and is never refreshed. Subsequent changes to the source records do not update an existing Delivery Order. This applies to every field in Section 2.2.5, including Company Name, Company Reg. No., Company Address, Tel, Recipient Name and Phone Number. Example: if the Company Name is amended in BackOffice > Account Management > Manage Company Accounts after the Delivery Order has been generated, the generated Delivery Order continues to show the Company Name as at generation. Re-downloading a previously generated Delivery Order returns the same document with the original values. No re-generation, refresh or synchronisation is triggered by later changes to the source data.	Generate a Delivery Order, then amend the Company Name in Account Management and re-download the Delivery Order: the Delivery Order still shows the Company Name as at generation. The same applies to Company Address, Tel, Recipient Name and Phone Number. No background process updates previously generated Delivery Orders when source data changes.

2.2.5 Delivery Order – Field Data Source Mapping

This section maps each Delivery Order field to its system data source for DO Type = Device Purchase, the type covered by this Change Request. All field values are captured at the point of Delivery Order generation and are not refreshed if the source data changes afterwards – see EAIN-12166-REQ-008. Sample values are illustrative only – personal and company-identifying values have been replaced with dummy data.

#	Delivery Order Field	Sample Value	Data Source
1	Delivery Order Number	20260811/DP-0001	Follow the existing Delivery Order Number already created for the transaction (Biometric Device Purchase & Software Installation Listing > Transaction Listing > Delivery Order Number). When an order is split (more than 20 units), each Delivery Order carries its own number (e.g. DP-0001, DP-0002). Each Delivery Order in a split also displays a split annotation below the number, e.g. "Split order · 1 of 2 · 40 units total".
2	Company Name	ABC MOTORS SDN. BHD.	UCD company that purchased the Dermalog device in this transaction.
3	Company Reg. No.	1234567-A	From Account Management > Manage Company Accounts > Company Details > "Company Reg. No.*".

#	Delivery Order Field	Sample Value	Data Source
4	Yr. of Registration	2025	From Account Management > Manage Company Accounts > Company Details > "Account Creation Date:" – display the year only.
5	Company (Branch) Address	NO. 1, JALAN CONTOH 1/2, TAMAN CONTOH, 43000 KAJANG, SELANGOR	UCD company's full address.
6	Tel	03-1234 5678	From Company Details (company telephone).
7	Number of Device	1	Number of device units purchased in the transaction. Maximum 20 units per Delivery Order. A transaction may contain up to 40 units; when it exceeds 20, it is split into up to 2 Delivery Orders (max 20 each), each with its own Delivery Order Number, combined in one PDF of at most 2 pages. On a split, each Delivery Order displays the number of units on that Delivery Order (e.g. 25 units shows 20 on the first and 5 on the second), not the transaction total.

#	Delivery Order Field	Sample Value	Data Source
8	Device Serial No.	ZF 00000000	From EAIN-12167 – Serial Number keyed in there is populated onto the Delivery Order.
9	Additional Remark – Type	DEVICE PURCHASE	Fixed value: "DEVICE PURCHASE".
10	Payment Details / Date	REF SR20260731000032-1030029, DATED 22 JUL 2026	Payment Reference ID, following the format displayed in the invoice (e.g. SR20260731000032-1030029). Date = payment date, displayed in DD MMM YYYY format (e.g. 22 JUL 2026).
11	Payment Amount	RM 904.00, TWO SOFTWARE INSTALLATION	Total amount paid for the transaction, plus the total number of software installations (free and purchased combined). Do not display the word "FREE".
12	Device Warranty	1 YEAR	Default wording "Device warranty 1 year" (confirmed).
13	Issued by – Name	Ahmad Bin Ali	Full name of the BackOffice user who keyed in the Serial Number (EAIN-12167).
14	Issued by – Designation	ADMIN	Default value "ADMIN".

#	Delivery Order Field	Sample Value	Data Source
15	Issued by – Date	03/08/2026	Delivery Order issued date, displayed in DD MMM YYYY format (e.g. 22 JUL 2026).
16	Issued by – Signature	(blank)	Default blank.
17	(B) Acknowledgement – Name	Recipient	Recipient Name (Nama Penerima).
18	(B) Phone Number	0123456789	The recipient's phone number.
19	(B) Appointment	(see description)	Appointment Slots – one row per device unit showing the selected date & time. If no appointment has been selected, a note is shown instead: “No appointment has been selected yet – to be arranged with the UCD.” On a split, appointment slots follow the device units on that Delivery Order (e.g. slots 1 to 20 on the first Delivery Order and 21 to 25 on the second). If no appointment has been selected, the note is shown on every Delivery Order of the split.

#	Delivery Order Field	Sample Value	Data Source
20	(B) Signature	(blank)	Completed manually. Signature of Recipient, with Name, NRIC, and Date.
21	Footer – return-copy email	support@eauto.my	support@eauto.my.

Appendix – Requirement Change Log

#	SRD Version	Requirement ID	Status	Reason
1	1.0	EAIN-12166-REQ-001	Added	Delivery Order auto-generated when the BackOffice user updates the consignment note; a "DO" button downloads the generated Delivery Order as a PDF.
2	1.0	EAIN-12166-REQ-002	Added	System auto-populates the Delivery Order fields from the transaction (no manual entry).
3	1.0	EAIN-12166-REQ-003	Added	Device Serial Numbers populated from EAIN-12167. Maximum 20 units per Delivery Order; a transaction (max 40 units) exceeding 20 is split into up to 2 Delivery Orders in one PDF. Split allocates blocks of 20 with the remainder on the final Delivery Order; serials run continuously and each Delivery Order shows its own device count and split annotation.
4	1.0	EAIN-12166-REQ-004	Added	Delivery Order Remarks default to "Device warranty 1 year".
5	1.0	EAIN-12166-REQ-005	Added	Generate the Delivery Order as a PDF using the existing Delivery Order template.
6	1.0	EAIN-12166-REQ-006	Added	Handle failure scenarios during Delivery Order generation.

#	SRD Version	Requirement ID	Status	Reason
7	1.1	EAIN-12166-REQ-007	Added	Quantity capped at 40 units per transaction.
8	1.1	EAIN-12166-REQ-008	Added	Delivery Order data fixed at point of generation.
