II. Search 7

III. Search Check 10

1.0 Introduction

The EZ Auto Data Gateway provides a platform for accessing the Claims history of cars registered in Malaysia via an Application Programming Interface (API) Connection. This document serves as a comprehensive guide for developers on how to integrate with the ezAuto API. It details the available endpoints, request and response formats, authentication requirements, and error handling mechanisms. This specification ensures a consistent integration and smooth communication between different platforms, enabling developers to easily understand and utilize the EzAuto API for seamless functionality and reliable performance.

2.0 API Reference

The EzAuto API adheres to the principles of REST. Our API utilizes predictable resource-oriented URLs, accepts form-encoded request bodies, returns JSON-encoded responses, and employs standard HTTP response codes, authentication, and verbs. The API key used for authentication determines whether the request operates in the production or test environment. The test environment is isolated and does not affect production data.

The base URL of the **EzAuto** API for both Production and Testing (UAT) Mode:

Production	https://jcvr.ezauto.my
UAT	https://jcvr-p3.ezauto.my

3.0 Authentication

The EzAuto API utilizes OAuth 2.0 Bearer Token authentication. This method requires a Bearer Token to be passed with your request. The token can be generated by supplying the `ClientUsername` and `ClientKey` provided upon registration and request for API access.

Given the high privileges associated with your authentication credentials, it is imperative to maintain their security. Do not share your username and key in publicly accessible areas.

All API requests must be transmitted over HTTPS; calls made over plain HTTP will fail. API requests without proper authentication will also be rejected.

4.0 API Function List

The EZ Auto API provides access to the Claims history of cars registered in Malaysia via an Application Programming Interface (API) Connection, and the available functions include **Get Access Token**, **Search** (to retrieve past accident history and vehicle specifications), and **Search Check** (to check vehicle availability). The API is REST-based and uses OAuth 2.0 Bearer Token authentication, requiring all requests to be transmitted over HTTPS. The API reference is hosted at the Testing (UAT) base URL, https://jcvr-p3.ezauto.my/swagger, and developers should always refer to the open API URL for the latest schema specification.

I. Get Access Token

Description	To request access token
URL	/oauth/APIToken
Method	POST

Request Information

Body

```
{
  "clientusername": "string",
  "clientkey": "string"
}
```

Response Information

Body Sample

```
{
  "access_token": "eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJuYW1laWQiOiJiL3hQd1N6STVZMD0iLCJ1bmlxdWVfbmFtZSI6InVzZXJAam9tY2hlY2suY29tLm15IiwiZ2l2ZW5fbmFtZSI6InVzZXIiLCJyb2xlIjoiVXNlciIsImh0dHA6Ly9zY2hlbWFzLm1pY3Jvc29mdX5jb20vd3MvMjAwOC8wNi9pZGVudGl0eS9jbGFpbXMvZXhwaXJlZCI6IjYzODE4NjI2MzI5NDUzOTE5NiIsIm5iZiI6MTY4Mjk5NzEyOSwiZXhwIjoxNjgzMDAwNzI5LCJpYXQiOjE2ODI5OTcxMjl9.bWb2VKqG1RpgsIXRuQPtYzvGy-KEB2o-Q6rOJqDpeMo",
  "token_type": "bearer",
  "expires_in": 3599.9150041,
  "scope": "",
  "schema": ""
}
```

II. Search

Description	To search past accident history and vehicle specification
URL	/api/ThirdParty/{Version}/Search
Method	POST
Available Version	V1.8 / V2.0. The unversioned /api/ThirdParty/Search is also available. The claim fields below are returned on every version; the BasicInfo pricing fields differ (see note under Body Sample).

Request Information

Header

Key	Value	Remark
Authorization	AccessToken	Get access token from API

Body

```
{
   "vehicleNo": "string",
   "vehChassisNo" : "string",
   "companyName": "string",
}
```

Name	Description	Sample Value
vehicleNo	Vehicle Registration Number to search past accident history. *	BLK8668
vehChassisNo	Vehicle Chassis Number to search past accident history. *	JTHKD5BH702050331
dealerId	Unique Identifier (e.g. SSM No) the dealer who performance the search	Old format: 123456-A New format: 201901012345

Note (*):

- Allowed to search either Vehicle Number or Chassis Number only.
- Validation on vehicleNo only allowed alphanumeric characters
- Chassis No only allowed alphanumeric characters and not more than 17 characters
- Vehicle Number is not more than 13 characters.

Response Information

Name	Description
RetailPrice	Average Retail Price: Represents the estimated current asking price for the vehicle in the retail market, derived from online classified listings of comparable vehicles and normalised to an average, based on either the provided or assumed odometer profile.
TradePrice	Recommended Trade Price: Represents the estimated amount a dealer is likely to offer for the vehicle as a trade-in, derived from retail market data of comparable vehicles and adjusted for either the provided or assumed odometer profile, reflecting typical dealer margins and reconditioning considerations.
ClaimsType	The ICAP claim type code for the claim, as a number - see the Claim Type List below. Returns null where the source recorded no claim type; the free-text claim type is never guessed at, so an uncoded claim returns null rather than a best-effort code.
PossibleTotalLoss	true when the claim is an Own Damage - Actual Total Loss (OD-ATL). Returned on each claim, and at vehicle level where it is true if any claim on the vehicle is an Actual Total Loss.
PossibleBER	true when the claim is an Own Damage - Constructive Total Loss (OD-CTL), that is Beyond Economical Repair. Returned on each claim, and at vehicle level where it is true if any claim on the vehicle is a Constructive Total Loss.
TotalPartsChanged	The number of parts changed on the claim, as a range rather than an exact count: "1 to 10 parts", "11 to 20 parts", and so on in steps of ten up to "91 to 100 parts", then "More than 100 parts". Returns "No information available." where no parts detail was recorded. The exact count is not disclosed. Replaces ApprovedParts.
MileageRange	Odometer reading as a 10,000 km band, e.g. "60,001 to 70,000 km". "Not Specified" when no reading was recorded; "More than 300,000 km" above 300,000 km. Replaces Mileage.
Severity	The approved claim amount as a percentage of the sum insured of that vehicle at that period, returned as one of six bands: LOW 1% to 5%; MEDIUM 6% to 15%; HIGH 16% to 30%; SEVERE 31% to 50%; CRITICAL 51% to 70%; CATASTROPHIC above 70%. Each band covers everything up to and including its stated top. Returns "NOT RELEVANT / NO SUM INSURED PROVIDED" where the vehicle has no sum insured, and for windscreen claims.

AccidentType	One of ten recognised descriptions: Collision; Damaged in Transit (Inland); Damaged in Transit (Marine); Fire; Flood; Malicious Damage; Missing/Theft; Robbery; Self-Accident; Windscreen. Any other or unrecorded value returns "Not Specified".
ClaimType	Deprecated. No longer disclosed and always returns "N/A". Retained for backward compatibility only - use ClaimsType for the claim type code, and PossibleTotalLoss / PossibleBER for the total loss indicators.
ApprovedParts	Deprecated. No longer disclosed and always returns "N/A". Use TotalPartsChanged.
Mileage	Deprecated. Always returns null. Use MileageRange.

Claim Type List (ClaimsType - ICAP Value)

ICAP Value	Description
1	Own Damage (OD)
2	Own Damage - KFK (OD-KFK)
3	Own Damage - Theft from Vehicle (OD-TFV)
4	Own Damage - Theft Recovered (OD-TFR)
5	Third Party - KFK (TP-KFK)
6	ODKFK/Third Party - Uninsured Losses (TP-UL)
7	Third Party - Vehicle Damage (TP-VD)
8	Third Party Property Damage (TP-PD)
9	Third Party Bodily Injury (TP-BI)
10	Third Party - Subrogation (TP-SB)
11	Windscreen (WS)
12	Extended Warranty (EXW)
13	Lost-of-Use (LOU)
14	Theft of Vehicle (TOV)
15	Own Damage - Constructive Total Loss (OD-CTL)
16	Own Damage - Actual Total Loss (OD-ATL)
17	Own Damage - Contract Repairs (OD-CR)
18	Own Damage - Marine Transit (OD-MNT)
19	Own Damage - Garage (OD-GRG)
30	Unspecified (Possible 3rd Party Claim)
31	Unspecified (Possible 3rd Party Claim)

The sample below is a V2.0 response. V2.0 returns RetailPrice and TradePrice in BasicInfo; V1.8 returns MarketValue, NewNetSellingPrice and NewCarPrice instead. The claim fields are identical across all versions.

III. Search Check

Description	To check vehicle availability
URL	/api/ThirdParty/SearchCheck
Method	POST

Request Information

Header

Key	Value	Remark
Authorization	API Token	Get access token from API

Body

```
{
   "vehicleNo": "string",
   "vehChassisNo" : "string",
   "dealerId": "string"
}
```

Name	Description	Sample Value
vehicleNo	Vehicle Registration Number to search availability. *	BLK8668
vehChassisNo	Vehicle Chassis Number to search availability. *	JTHKD5BH702050331
dealerId	Unique Identifier (e.g. SSM No) the dealer who performance the search	Old format: 123456-A New format: 201901012345

Note (*): Allowed to search either Vehicle Number.

Response Information

Body Sample

Positive

```
{
   "charge": 0.0,
   "error": false,
   "message": "Record found",
   "result": "Yes",
   "Maintenance": {
      "Title": "Title 222",
